

March 2021 Update

IFF FUNDS LAB AT WASHINGTON UNIVERSITY IN ST. LOUIS

The overall goal of this project is to dissect the cellular and molecular determinants required for human pediatric low grade astrocytoma (PLGA) engraftment as a means of developing robust and reproducible patient-derived tumor models. Led by Dr. David Gutmann, this project will explore creating a new low grade tumor animal model which we are confident will produce powerful results.

**DESIGNS

DONATE**
you shop • we give

Charitable shopping at its best. *DESIGNS THAT DONATE* brings to the marketplace a curated collection of items to satisfy all shopping and gift giving needs, most importantly donating a percentage of every purchase to the customer's Charity of Choice. This month they're featuring IFF as the Charity of the Month and will donate 5% of all purchases on an ongoing basis when IFF is selected. www.designsthatdonate.com
